Dear Dr. Mariela Alfonzo,

**I am a computer science student** studying at the Hong Kong University of Science and Technology. I found your website because I am looking for a way to apply my technical skills to my passion for urban design and planning.

**I am a passionate developer** with a breadth of experience in various technical areas:

- Web development and UI/UX design. I am currently building my own personal site using JS/HTML/CSS but I also have some experience with Angular and React.
- Solid language skills in C++ and Python both academically and through projects in web scraping and basic game development.

**I am interested in walkability** due to my experiences living in Shanghai and Hong Kong, and the unique challenges that both cities face when it comes to making better use of their space. I read on your website that your dataset was increased with many datapoints from China, and I am interested in learning more about how that might have affected your model.

Best regards,

Simon Renblad
